Village Survey: Kumbhargani Village (Tal- Jawali)

Date: 24th January, 2019

Report:

Introduction:

In India, more than 65 percent population is still residing in rural areas. Rural areas also contribute to the economy of country. However, these areas have always been neglected by the planners and decision makers from development point of view. It is mainly due to the lack of proper information system for rural areas. These days, planning has become an important tool to handle different complex problems in decision making. This created the need for the development of a suitable information system. The development of the country depends on the improvement of rural areas. Geography has become an extremely varied, versatile and highly empirical discipline and its area of study have grown a great deal since its inception (Harvey, 1969). Geography is concerned with the description and explanation of the areal differentiation of the earth's surface. The discipline is gaining much importance due to an expansion of knowledge and superiority in the subject approaches. Various branches of geography are developing with an intervention of information technology and the discipline has become more informative and highly appreciable one which leads to changes in the content, approaches and techniques.

Importance of the Study:

Village Information has been defined as the process of recording and dissemination information about the village resources information; census, utilities, land use and the use of land its associated resources. A good administration system should permit the integration of village information and land use with economic, sociological and environmental data in support of physical planning.

Location:

The Jawali tahsil is located on 17°, 57" and 17 °, 25" north latitude and 73°, 32" and 73°, 57" east longitudes. The Jawali tahsil covers on area of 864. 53 sq.km in Satara district, with a height of 679 meters above mean sea level. The Jawali tahsil is totally rural area. According to 2011 census the total villages of Jawali tahsil is 153. Medha is the tahsil headquarter of the Jaoli tahsil. Jawali tahsil is divided into six revenue circles, Medha, Karahar, Kasabe Bannoli, Anewadi, Kudal and Kelghar circles. Kumbhargani village located in the Medha

Circle and it is hilltop location nearby 1150m height from the mean sea level. Kumbhargani village located 17.77 latitude to 73.89 longitudes in Medha circle of Jawali tehsil. Kumbhargani village is located in Jaoli Tehsil of Satara district in Maharashtra, India. It is situated 5km away from sub-district headquarter Medha and 26km away from district headquarter Satara. As per 2009 stats, Kumbhargani village is also a gram panchayat. The total geographical area of village is 80 hectares. Kumbhargani has a total population of 312 peoples. There are about 68 houses in Kumbhargani village. Satara is nearest town to Kumbhargani which is approximately 26km away. Total population of Kumbhargani village is 133 male and 122 female populations.

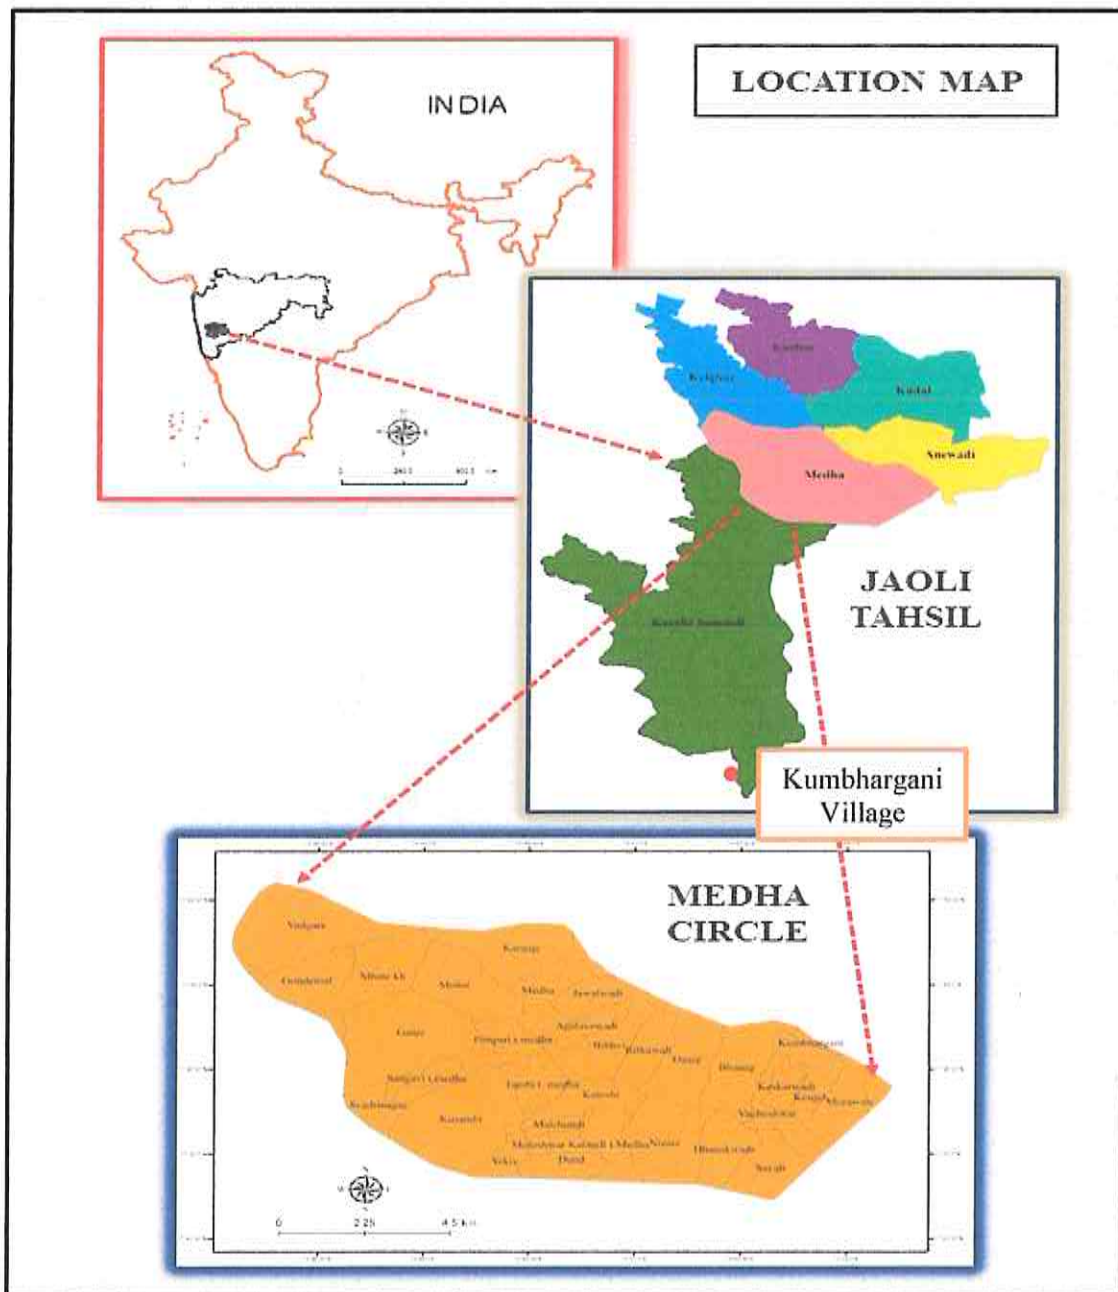

Figure- 1

**Climate and rainfall:**

The Jawali tahsil and surrounding region experiences a monsoon type of climate. The climate of Jawali is favourable and healthy. The climate of Jawali tahsil is divided in to four major seasons: The cold season, hot and dry season, rainy season and retreating monsoon season. The month of May is hottest month of the year and the December is coldest month of year. The maximum temperature is between 34⁰ to 38⁰c and minimum temperature between 10⁰ to 15⁰c in the tahsil. The rainfall varies widely in the different part of the tahsil depending on their closeness to Sahyadri. The maximum rainfall received in the month of June, July, August and September from southwest wing of monsoon winds. The average rainfall of the study region is 1250 mm.

Soil:

The soil of the Jawali tahsil generally falls under three main categories. Laterite soils in hilly region, Lighter black soils on the slopes and Medium black to deep Black soil in the plains. Laterite soils are subjected to heavy leaching and high degree of erosion. The reason for red colour is high proportion of iron oxide in the soil. This soil has deficiency of nitrogen, organic compound and phosphorous. It can be productive after providing heavy fertilizer and irrigation facilities. Lighter black soils are locally called '*Malran*'. These soils are hard, rocky, and brown in colour. They are rich in lime and potash content but shallow in depth. The laterite soil used for '*Kumri*' cultivation or would ash tillage on account of heavy rainfall. Laterite soils are red in colour and are locally known as '*Tambadi mati.*' Medium black and deep black soils found mainly along with Niranjana, and Venna river Basin. Soil is usually characterized by a rich and fertile black soil contains high proportion of nitrogen and organic matter.

Data Collection/Field Survey:

The present work concentrates on both primary as well as secondary sources of information. The data is collected accordingly. As far as the primary sources of information are concerned, attempt has been made to prepare an inclusive questionnaire and the information is collected through exhaustive field survey whereby all the households have been visited personally apart from collection of each relevant aspect undertaken for the study. The secondary information has been collected from the district statistical office, Jawali tahsil office and each village Gram panchayat office etc.

Conclusions:

- The migration of the males to Mumbai and other urban settlements for job purposes. Major cause of increase in the number of women in the tahsil is its economic backwardness. Heavy rains during the rainy season and dry weather during the rest of the year restricts people only to a limited number of sources of earning. Whatever they grow in the farm is insufficient for survival. Hence, they migrate to Mumbai and other urbanities. Migrated men leave women behind to take care of the farms. Women have to manage households besides working in the farm. They take care of the old people and children at home.
- Education facilities are inconvenient due to complex topography of the region. Educational awareness among people is far less because of their short contentment. People do not want to give their children higher education because they have a
